INTRODUCING ALASKA CONCRETE SOLUTIONS' LB-33 SCHWING TELESCOPIC LOOP BELT CONVEYOR -**DELIVERING DUAL CONCRETE & BACKFILL PLACEMENTS WHERE OTHERS CAN'T**

HIGH CAPACITY. MULTI-USE

Move more material faster & more precisely with:

- 107' Horizontal Reach
 - Up to 504 cu Yds/Hr (based on material) Up to 61' Vertical Reach
 Up to 6" Aggregate

COST-SAVING SPEED

OUTMANEUVER + OUTPERFORM ON **ANY JOB SITE**

PRECISION, SPEED + RELIABILITY

Save time + labor with high-capacity material placement and compaction occurring as layers are placed. Increased placement speeds, fast set-up times and less machinery needed on site make the loop belt an economical solution.

With 360° rotation and a low 17' clearance we can load and place a wide range of aggregate material in nearly any position or location. This allows work on a broader range of high-volume concrete or backfill applications, from footings and foundations to bridge decks and tower foundations.

The loop belt conveyor is an excellent material placement solution for high-capacity, zero-slump, low-clearance and difficult-to-place applications where precision, speed & reliability are a priority.
